

Software Testing

by

Uraz Cengiz Türker

Date and Time: March 21st, 2018 (Wednesday), 13:00

Place: Room Z23, Computer Engineering Building, GTU

All interested are cordially invited.

Software testing is an indispensable part of software development process. However in spite of its importance, automated software testing has not gain required attention from the industry and the academia. I have been working on software testing for nearly 8 years. I received my B.Sc., MSc. and PhD degrees from Sabanci University (2006, 2008, 2014 respectively). I am an Assistant Professor of computer engineering in Computer Engineering Department of Gebze Technical University since 2016.

In this talk I will first provide basic information related to testing systems modeled as Finite State Machines and try to summarize my academic achievements and will touch a little bit of my recent works.
