

Mehmet Özbil received his BS degree from Istanbul Technical University, Chemistry Department in 2007. After a year he joined the chemistry graduate program at the University of Miami, FL, USA, where he received his Ph.D. degree in 2013 under the supervision of Dr. Rajeev Prabhakar in the field of computational biochemistry. Upon completion of his graduate studies, he joined the research group of Dr. Victor S. Batista at Yale University, CT, USA, and completed his post-doctoral studies in 2015. His research involves in investigation of enzymatic reactions, structural properties of natural proteins, functioning of enzymes, and aggregation of small peptides including insulin and amyloid beta peptide. He has been an author of eleven publications in the area of computational biochemistry.
